History of Zuercher Technik

Our milestones

- 1986: Company founded by Roland Zuercher
- 1988: Set-up of a production and assembly
- 2004: Start of pressure regulator production
- 2008: Fusion with Procol Engineering
- 2013: Partnership with JDV Control Valves
- 2015: Expansion of production capacity
Who we are?

Zuercher Technik works with industrial valves, automation and application-specific configuration. Focus is on pressure regulators, ball valves, butterfly valves and control valves. In addition to our home market of Switzerland, we are also active internationally worldwide via our sales-partners.

Our philosophy – Technology for Professionals

**Safety – Availability – Quality**
Ball valves

Zuercher Technik provides a wide range of ball valves. In nominal sizes from DN10 up to DN600 or ¼” up to 24” in pressure classes up to PN320/ANSI 2500lbs. Standard materials are stainless steel as well as carbon steel, special materials are on request. Application-specific features, such as a heating jacket or a trunnion mounted design, are also possible.

- DIN/ANSI flange ball valves
- Wafer- and screwed ball valves
- 3-pcs. and 3-way-ball valves
- Metal-, soft-seated and lined ball valves
Tank blanketing valves

Reducing- and back pressure valves regulate pressures in the mbar range. They are used for inerting and swapping of containers, reactors, stirred tanks, centrifuges, etc. with inert gas, for example with nitrogen.
Medium pressure reducing and relieving valves are used for pressures up to 16 bar. The high demand of the chemical and pharmaceutical industry resulted in the development of more specific and corrosion resistant pressure regulators.
Industrial valves

Includes at Zuercher Technik the sections of butterfly valves, strainers, globe- and check valves. Standard and special designs in various sizes and pressure classes are available.

- Strainers
- Globe valves
- Check valves
- Butterfly valves
Automation

Zuercher Technik works with industrial valves, automation and application-specific configuration. On request, we assemble the automation components, such as pneumatic actuators and positioners. Of course, we adjust and set it to the required function.

- Pneumatic actuators
- Electric actuators
- Positioners
- Limit switches + solenoid valves
- Assembly, adjustment, functional tests
A quick availability of the valves in addition to quality and safety criterias become a more and more important factor. Zuercher Technik is meeting these requirements with a comprehensive stock for the key products and expanding manufacturing capacity.
Our customers – our markets

- Petrochemical industry
- Oil & gas industry
- Chemistry
- Pharmaceutical industry
- Biotechnology
- Food industry
- Energy
- Engineering
- Procurement and construction
Together with our partner JDV Control Valves we develop and manufacture industrial valves for demanding applications. For the petrochemical-, steel-, power plants- and chemical industry, we offer powerful and durable valves.

Together we live the philosophy of our claim «Swissness». That means precision, reliability and continuously best quality. This challenge is our daily drive.
