

*"Insightix gave us a real-time baseline of our entire network within minutes. In the past, accessing network information at this level was not possible. Previously, we were only able to detect a portion of the information provided by Insightix by using scans from different systems along with significant manual input from our IT team."*

**Itai Argoetti**  
IT System Manager  
Orbotech  
(NASDAQ:ORBK)

*"Insightix appeals to both network managers and security managers, discovering management and security gaps where other tools might miss devices and software."*

**The 451 Group**

Insightix develops the only complete, real-time and agentless network discovery and network access control solutions. Insightix solutions provide comprehensive network coverage and deliver an immediate return-on-investment for IT operations, network security and regulation compliance.

### Comprehensive Network Visibility and Access Control

Today's IT networks are increasingly complex and dynamic. Most have evolved over time as a patchwork of old and new components.

Existing solutions for both network discovery and network access control cannot handle the rate of change occurring on networks today and provide only partial network coverage.

Insightix goes well beyond the technical limitations of existing solutions by enabling an enterprise to see and control its entire IT infrastructure for the first time. The complete, accurate and real-time network information unobtrusively obtained by Insightix enables an enterprise to maintain:

- Complete IT asset inventory
- Accurate network topology
- Real-time change detection
- Enterprise-wide network access controls

By providing comprehensive network visibility and access control, Insightix customers reduce the time, cost and complexity associated with IT management. The comprehensive network information generated by Insightix significantly contributes to IT project success, appropriate IT spending and reduced security risks.

### Immediate Return-on-Investment

Insightix's network discovery solutions automate the ongoing access to critical network information. IT network, operation and security professionals using Insightix no longer need to spend time on tasks related to finding information associated with network elements, which is currently estimated to occupy 20%-40% of their time.

As a result, Insightix saves valuable time, allowing IT departments to significantly reduce costs and reallocate resources to complete additional IT tasks and projects.

IT security professionals using Insightix's network access control solution can define and enforce an access policy for the entire network within minutes. The enforcement of the policy is immediate with Insightix directly identifying and disconnecting unauthorized elements. Insightix continuously enforces the network access policy by automatically checking devices as they attempt to connect to the network, only allowing connectivity to authorized devices.

### Additional Value

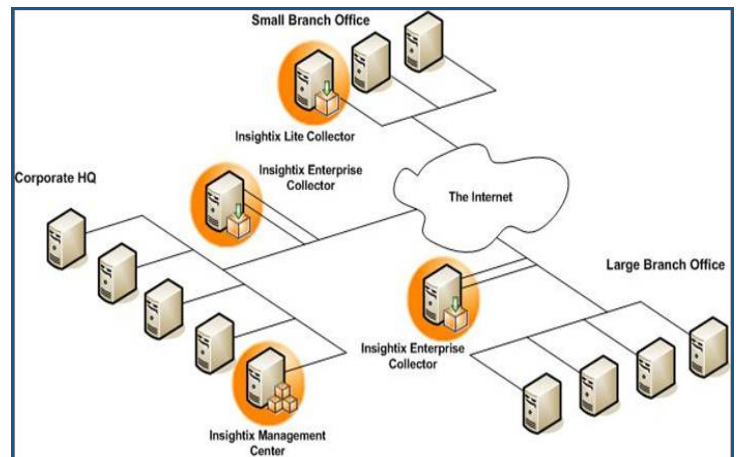

Insightix provides IT management additional value by:

- **Increasing value of past investment in IT solutions** that rely on infrastructure information, such as asset management, patch management and CMDB.
- **Upgrading IT staff** – IT professionals at all service levels can resolve problems fast with ongoing access to comprehensive network information.
- **Eliminating interdepartmental dependency** – IT professionals can access all the necessary network information without relying on assistance or input from staff from different teams or departments.

### Insightix Solutions

Insightix's solutions include:

- **Enterprise Collector** – network discovery and monitoring for enterprises with complex IT infrastructures.
- **Lite Collector** – network discovery and monitoring for companies with a single broadcast domain.
- **Management Center** – unified management view of multiple source discovery and monitoring information.
- **Insightix NAC** – discovery-based network access controls.

Insightix solutions are simple to install and are operational in approximately one hour. The deployment of an Insightix solution requires:

- No software agents
- No inline devices
- No software or hardware replacement

### Industry Leadership

The Insightix management team is comprised of experienced leaders in the network management and security industry. Insightix's investors and advisory members include industry leaders from IBM, CA, Citrix, Check Point, RSA, Comverse and Westcon.

Insightix's investors include Quest Software (NASDAQ:QSFT), several technology veterans and Blumberg Capital.

Insightix offers its products through a network of channels across the United States, Europe and Asia. Most of Insightix customers are medium-sized, publicly traded companies.
